Response to Arguments

Applicant's arguments with respect to claims 44-56, 59-75 and 78-83 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 44, 46, 59-64, 66 and 78-83 are rejected under 35 U.S.C. 102(e) as being anticipated by Chang et al. (US 6,118,864).

1. Regarding claims 44, 59-64, 78 and 80-83, Chang discloses a method of operation for a telephone interface control system (Figure 1D, items 50 and 56; col. 7, lines 20-24) that implements a remote telephone extension over a packet data network (abstract, lines 1-10; Figure 1A, item 4; col. 3, lines 36-38). The packet data network couples a remote telephone interface (Figure 1A, item 19) to the telephone interface control system. The telephone interface control system comprises a first telephone interface (Figure 1D, item 50) in which a call made to a remote device is received, a control system (Figure 1D, items 2 and 38-39) that communicates to the remote telephone interface (Figure 5B, step 134) over an interface (Figure 1D, item 2) that inherently receives an indication of a ringing voltage or tip-ground (note: a subscriber telephone, item 14c, goes off-hook to place a call) and generates an off-hook signal (Figure 1D, item 44). The method comprises receiving an inherent ringing voltage or tip-ground signal at the interface, indicating that the ringing voltage or tip-ground signal is appearing at the telephone interface, and calling the remote device over the packet data network (Figure 5B, item 134). The method further comprises providing forwarding on

ring-no-answer for remote telephone extensions (Figure 5B, steps 130, 160, 164, and 136; col. 3, lines 13-15; col. 15, lines 19-22 and lines 28-37; col. 17, lines 43-46).

2. Regarding claim 46 and 66, the method comprises emulating a tie-line over packet data network (Figure 5, step 136).

3. Regarding claim 79, the call is forwarded to a voice mail system (Figure 5B, item 154).

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 45, 47-49, 65 and 67-69 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chang et al. (US 6,118,864).

4. Regarding claim 45, 47-49, 65 and 67-69, Chang does not disclose that the first telephone interface is an FXO interface nor using an private line automatic ringdown. One skilled in the art would recognize that FXO and FXS are common interfaces used to connect telephony devices and that a PLAR is commonly used in maintaining a connection between two telephony devices.

Therefore, it would have been obvious to one skilled in the art at the time the invention was made to use an FXO interface or PLAR in the invention of Chang as a matter of design choice.

Allowable Subject Matter

5. Claims 89-111 are allowed.

6. Claims 50-56 and 70-75 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
